Solve Door Sealing Problems

*A straightforward
approach for solving leaking
doors and passing REAC.*

Effective and Long-Lasting Door Seals

Building owners need an easy and consistent way to restore the effectiveness of aging door systems.

Storm Strips

The Storm Strips kit was developed from input from maintenance departments and installers. They asked for a way to quickly install door seals that would effectively seal crooked and warped doors without the need to adjust existing hardware. Our passive door seal kit does just that .

Traditional door seals are designed for new doors that are straight and plumb. Over time all doors start to sag, twist and warp causing old door seals to fail. Simply replacing old seals will no longer work because the whole door assembly has shifted.

Storm Strips also allows for door repainting while the property is occupied.

One Solution

Prior to Storm Strips, specifiers and building managers could not rely on one system that worked on every door. Traditional seals often lead to Change Orders and for managers to consider expensive door replacements.

- Seals Every Door
- Makes Repainting Easy
- Best Rodent Protection
- High Quality—Long Lasting

Door seal inserts can be removed (with special knowledge) for painting.
